We can complete the parallelogram as in the figure on the left. The vector from the origin to this new vertex is the vector $\mathbf{a} + \mathbf{b}$. In the figure on the right we have translated vector \mathbf{b} so that its tail is the head of vector \mathbf{a} . The sum $\mathbf{a} + \mathbf{b}$ is the

directed third side of this triangle. c

Fractional calculus is when you extend the definition of an n th order derivative (e.g. first derivative, second derivative,...) by allowing n to have a fractional value.. Back in 1695, Leibniz (founder of modern Calculus) received a letter from mathematician L'Hopital, asking about what would happen if the “ n ” in $D^n x/Dx^n$ was $1/2$. Leibniz's response: “It will lead to a paradox ...

Is a subfield of calculus concerned with the study of the rates at which quantities change. It is one of the two traditional divisions of calculus, the other being integral calculus, the study of the area beneath a curve. Differential equation Is a mathematical equation that relates some function with its derivatives. In applications, the ...

Algebra Formulas A basic formula in Algebra represents the relationship between different variables. The variable

could be taken as x, y, a, b, c or any other alphabet that represents a number unknown yet. Example - $(x + y = z)$ $(a + b)^2 = a^2 + 2ab + b^2$ $(a - b)^2 = a^2 - 2ab + b^2$ $(a + b)(a - [...])$
